

*Vienna, Austria*

Annual Congress of the  
European Association of Nuclear Medicine  
October 21 –25, 2017  
Vienna, Austria

## **CME 2 (EANM/ESVS)**

**Sunday, October 22, 11:30-13:00**

### **Session Title**

#### **Vascular Graft Infection**

### **Chairs**

Alberto Signore (Rome)

Nabil Chakfé (Strasbourg)

### **Programme**

11:30 - 12:00 Nabil Chakfé (Strasbourg): Importance of Imaging Vascular Graft Infections in Clinical Practice

12:00 - 12:30 Leonardo Marques (Flensburg): Radiological Possibilities in Vascular Graft Infections

12:30 - 13:00 Chiara Lauri (Rome): Nuclear Medicine Possibilities in Vascular Graft Infections

### **Educational Objectives**

1. Description of the key clinical features of vascular graft infections.
2. Overview of importance of the correct diagnosis of vascular graft infections.
3. Overview of radiological possibilities to diagnose vascular graft infections.
4. Overview of nuclear medicine possibilities to diagnose vascular graft infections.

### **Summary**

This CME session is dedicated to vascular graft infections. First, the clinical point of view will be explained: what are the key clinical features of a patient with suspected vascular graft infection, what is the importance of an early and correct diagnosis, what are the treatment options. Then various diagnostic imaging modalities, from a radiological and from a nuclear medicine point of view, will be discussed and what the possibilities and the position in the diagnostic work-up are in a patient with a suspected vascular graft infection.

### **Key Words**

Vascular graft infection, clinical features, CTA, MRA, WBC scintigraphy, FDG-PET
